

IN THE CLAIMS

Claims 1 to 3 (Canceled).

Claim 4 (New)A glue tape cutter, comprising

a cutting table with two opposite lateral covers;

a curved substrate, being disposed at the bottom of the cutting table;

at least a holding blade, being fixed to the cutting table above the press plate;

a cutting base, being rotationally attached to the cutting table;

a knife blade, being attached to an upper part of the cutting base;

and

a shaft, being disposed at a lower part of the cutting base and both ends thereof being attached to the lateral covers of the cutting table respectively

characterized in that an end of the shaft extends outward from one of the lateral covers to engage with an engaging hole at an end side of a stir lever so that the stir lever can rotate the cutting base and a spring piece is mounted in the engaging hole surrounding the extending outward end of the shaft to keep the stir lever and the cutting base in place.

Claim 5 (New) The glue tape cutter as defined in claim 4, where the end of the shaft engaging with the engaging hole has a flat section corresponding to a flat part at the inner wall surface of the engaging hole of the stir lever.

Claim 6 (New) The glue tape cutter as defined in claim 4, wherein the inner wall surface of the engaging hole has a receiving recess with an opening to receive the
